Technical Specification

Model	QRS	QRB
Interface	Pulse & UART(Optional)	
Power Source	12Vdc	
Power Consumption	Approx. 1A	
Weight in Kg	0.5 Approx	0.6 Approx

Wire Connection

- +12Vdc
- Ground
- Pulse Output
- Inhibit (low / High)
- UART - TX
- UART - RX

⚠ Do not Plug-in/ Plug-out the cable or terminals the device while it is ON.

Troubleshooting

If display shows	Causes	Solutions
Device is frequently Restart	➢ Incorrect SSID / Password. ➢ 5GHz frequency band not supported ➢ Insufficient current rating	➢ Enter correct, SSID / Password. ➢ Connect to 2.4GHz. ➢ Connect 12Vdc with 1A power supply
QR NOT AVAILABLE	➢ Inhibit is not connected	➢ Connect Inhibit line to low or high ➢ Check Inhibit connection
NO INTERNET Please connect internet	➢ Internet not available in your hotspot ➢ Device is out of range from network	➢ Power OFF and ON the Device ➢ Check Internet connectivity ➢ Fix the device to nearest network area
HARDWARE 1.2.0 FIRMWARE 1.3.0	➢ Device disconnected from the Wifi / Network	➢ Power OFF and ON the device ➢ Reconnect the internet / Network

Packing List

QRPay device: 1No | Cable : 1 No | Mounting Screw : 4 No's

Warranty

How to Connect the Internet

DEVICE ID = 105
Booting Device...1s

⚠ This device is supported **2.5GHz** frequency only

Step:1
if shows
"Booting Device..1s"
Device is ready to connect internet

Step :2
Turn on the Wifi on your smart phone and select the
AALROOT_QRXXXX

Step :3
Enter the password
"5432167890"
and **"Connect"**

Step :4
Select the
"Configure WIFI"

Step :5
Select your SSID(Hotspot) and Enter the Password and **"Save"**

Step :6
After save the display Shows
"WIFI Connected" and
Internet Connected"
Now the device is ready
